

Second Open House: A project specific open house was held in December, 2016. The public expressed full support of the project goal of adding a separated pedestrian path along the Boulder Creek Path within the project area. At this time, three path options were presented for the section from the Boulder Valley School District bridge to 13th Street: north, north minimal build and south. For this section, the public feedback received rated lighting, widening the existing path, adding signs and enforcing the multi-use path rules as the top safety improvements for this stretch of the Boulder Creek Path:

Add lighting	7
Widen the existing path	5
Add signs	4
Enforce multi-use rules	4
Build a separate path for pedestrians along the existing path	3
Build a separate path for pedestrians on the other (south) side of the creek	3
Add path striping and/or markings	2
Create a slow zone for all users	2
Other	2
Clean up the vegetation along the existing path	1

The public also voted on their preferred pedestrian scale lighting design. The luminaire WE-EF-VFL520LED was by far the most preferred style. This luminaire is the same as what will be installed in the Civic Area Project Area and within the Arapahoe Underpass project (Arapahoe & 13th Street) creating a continuous lighting option throughout the various projects along Boulder Creek.

Not all attendees that attended the event (20) completed the comment form (8). Everyone who completed the comment form used the path frequently, defined as daily or weekly and walked the path. Five of those that completed the comment form biked on the path and/or used the path for sightseeing/enjoying nature. Two of those that completed the comment form used the path to run.
